SUMMARY

- BI developer with 3.5+ years of experience in building scalable systems and designing dashboards to provide actionable insights
- Experience working with large scale data sets to solve complex problems by utilizing problem-solving skills

TECHNICAL SKILLS

- **BI Technologies:** SSIS, SSAS, SSRS, Tableau, PowerBI, Salesforce, SAP BI 7.x, Qlikview, SAP Business Objects (BO)
- **Database Technologies:** MySQL, MS-SQL Server, MongoDB, HANA Modeling, Google Analytics, HDFS, Pig, Hive
- **Programming Languages:** Python, R, D3.js, JavaScript, SAP ABAP, Java, HTML, CSS

EDUCATION

University of Washington Seattle, WA

Master of Science in Information Management [GPA: 3.8] Graduation: Jun 2017

Relevant coursework: Business Intelligence Systems (SSIS, SSRS), Advanced Data Visualization, Introduction to Python for Data Science, Introduction to R, Data Science I using R, Machine Learning using Python, Social Network Analysis

University of Mumbai, K J Somaiya College of Engineering Mumbai, India

Bachelor in Computer Engineering Jun 2012

WORK EXPERIENCE

University of Washington Seattle, WA

Teaching Assistant for Foundations of Strategic and Managerial BI (IMT 576) Sept 2016 - Present

- Assisting in developing course structure, lab sessions and delivering lectures, in-class activities and grading

Intuitive Surgical, Inc. Sunnyvale, CA

Business Intelligence Intern Jun 2016 – Sep 2016

- Increased reports' accessibility by 30% by developing POC to integrate reports built in 4 different BI tools into a unified portal
- Executed Linux server administration and database configuration to host the BI portal in 2 weeks
- Prepared 5 comprehensive use cases, and worked with the vendor to ensure that the portal meets all design specifications
- Created Tableau dashboards to analyze data stored in Salesforce to make effective product design decisions
- Enabled users to merge report KPIs from disparate sources, reducing manual efforts by 50% to increase efficiency

Colgate-Palmolive India Ltd. Mumbai, India

Associate Analyst Aug 2013 - Aug 2015

- Built end-to-end BI and reporting solution for LATAM using BO, expediting decision-making process
- Optimized the performance of dashboards and ETL process by 75% using HANA and data services to reduce the downtime
- Won the 'Ace' award for building automation tool for target upload which reduced service tickets by 25%

Executive Associate Aug 2012 - Aug 2013

- Redeveloped backend design & improved UI of BI dashboard, increasing dashboard utilization
- Developed custom ABAP scripts to provide ~200 users secure and concurrent access to BI reports
- Implemented iPad compatible version of Market Share/Size dashboard to send on-the-fly updates to ~50 executives

ACADEMIC PROJECTS

Prediction model on Boston data using kNN clustering Feb 2017

- Developed kNN algorithm in Python to predict the median price of homes for any given instance in test data set
- Improved the RMSE value by developing K-fold cross validation by passing different k-values to the model

Exploratory data analysis of nycflights using R and Python Jan 2017

- Analyzed the data set to discover patterns in delay of flights in relation to weather and operating conditions
- Performed data wrangling using tidyverse to create effective graphs using ggplot2
- Transformed and aggregated data using pandas & numpy, sklearn and used matplotlib to make informative graphs

Prediction Model on Titanic data in R Nov 2016

- Performed logistic regression to determine the relationship between survived and other explanatory variables
- Applied classification trees and randomForest to classify the probability of a record to be survived or not

Network graph to analyze Facebook's data using Python to perform cluster analysis May 2016

- Generated a network to calculate centrality and shortest path using networkx and visualized using Plotly

BI Solution for a manufacturing company to recommend new business strategies Mar 2016

- Developed multi-dimensional model, ETL packages and views using SQL, SSIS to analyze impact of resellers on sales
- Built a Tableau dashboard to derive trends in profits and sales and recommended innovative business strategies

Explorable explanation of stages of startups using interactive visualizations in D3.js & JavaScript Feb 2016

- Developed "scrollytelling" interactive visualization to demonstrate in-depth analysis of corporate stages of startups
