MEETA PANDIT

mgpandit@uw.edu | +1 (206)-829-0633 | https://meetapandit.github.io | www.linkedin.com/in/meetapandit

SUMMARY

- BI developer with 3.5 years of experience in building scalable data models, ETL processes & impactful dashboards
- Experience working with large scale data sets to solve complex problems by utilizing efficient statistical models

TECHNICAL SKILLS

- **BI Technologies:** SSIS, SSAS, SSRS, Tableau, PowerBI, SAP BI 7.x, Qlikview, Business Objects (BO)
- **Databases:** MySQL, MS-SQL Server, Oracle, MongoDB, HANA, Google Analytics, HDFS, Pig, Hive
- **Programming Languages:** Python, R, D3.js, JavaScript, SAP ABAP, Java, HTML, CSS

EDUCATION

University of Washington — Seattle, WA
Master of Science in Information Management [GPA: 3.8] — Graduation: Jun 2017

University of Mumbai, K J Somaiya College of Engineering — Mumbai, India
Bachelor in Computer Engineering — Jun 2012

WORK EXPERIENCE

University of Washington — Seattle, WA
Teaching Assistant for Business Intelligence Systems (IMT 576) — Sep 2016 – Mar 2017

- Assisted in developing course structure, conducting lab sessions, lectures and grading assignments & projects

Intuitive Surgical, Inc. — Sunnyvale, CA
Business Intelligence Intern — Jun 2016 – Sep 2016

- Improved accessibility of BI dashboards by integrating cross-application reports from 4 BI tools into a unified portal
- Enabled users to merge report KPIs from disparate sources, reducing manual efforts by 50% to increase efficiency
- Developed POC of enterprise-wide data warehouse by merging tables from SQL Server, Salesforce and SAP BW
- Built classification model to classify complaints about functioning of robots into breakdown or maintenance issues

Colgate-Palmolive India Ltd. — Mumbai, India
Business Intelligence Associate — Aug 2013 - Aug 2015

- Built end-to-end BI solution for LATAM using SAP BI and BO to track performance of sales & marketing executives
- Optimized performance of ETL process by 75% using HANA and BO data services, reducing downtime from 4 hrs to 30 mins
- Won the 'Ace' award for building automation tool for target uploads, reducing percentage of service tickets by 25%

Business Intelligence Developer — Aug 2012 - Aug 2013

- Redeveloped backend & UI of CRM BI application to add new countries, removing points of failure in ETL processes
- Developed custom ABAP scripts to provide ~200 users secure and concurrent access to BI reports
- Restructured master data object & ETL processes to add location id to primary key, avoiding overlap of report KPIs

ACADEMIC PROJECTS

Prediction model on Boston data using kNN clustering — Feb 2017

- Implemented k-NN algorithm in Python from scratch to predict median home prices for instances in test data
- Improved RMSE by 20% using K-fold cross validation and 25 different k-values to derive best fit model

Correlation between Node-level indices and distributions on social networks using R — Feb 2017

- Analyzed distributions of node-level indices like indegree, outdegree and betweenness centralities
- Derived best fit model distribution for a random directed graph by comparing AICC and BIC values

Exploratory data analysis of nycflights using Python — Jan 2017

- Discovered patterns in flights delays and derived correlation of delays with weather and operating conditions
- Transformed and aggregated data using pandas, numpy & sklearn and used matplotlib to plot informative graphs

Classification model to predict passenger's survival on Titanic data using R — Nov 2016

- Evaluated logistic regression, decision trees and randomForest by comparing ROC curves and model efficiency
- Performed data wrangling using dplyr and designed effective visualizations using ggplot2

Network graph to analyze Facebook's data using Python — May 2016

- Built a network graph to perform cluster analysis and analyzed small world network phenomena
- Calculated centrality and shortest path using Python and plotted network graph using 'Plotly' library

BI Solution for a manufacturing company to recommend new business strategies — Mar 2016

- Developed multi-dimensional model, ETL packages and views using SQL, SSIS to analyze impact of resellers on sales
- Built Tableau dashboard to derive trends in profits and sales and recommended innovative business strategies

Explorable explanation of stages of startups using interactive visualizations in D3.js & JavaScript — Feb 2016

- Developed "scrollytelling" interactive visualization to demonstrate in-depth analysis of corporate stages of startups
